

Working days

During November 15-18, the head of the technical engineering department of OPORA ENGINEERING Vladislav Golubenko with his colleague the senior engineer Andrey Chernov were sent for a business trip to St. Petersburg to perform the important task - the supervision of the construction of the lighting mast.

The weather conditions were difficult – the wind speed was 30 m / s. However, it didn't prevent the engineers from assembling one full mast, and they set the barrel of the second one with service platform and attachments.

(According to the corporate newspaper "SVETskaya zhizn" № 4 (25), 2013)
